Upcycled Recyclate Stretch Film

At Manupackaging, we are extremely committed to producing a circular economy for our stretch wrap solutions.

Our recyclate-based blend, incorporating 30% post-commercial recycled content, is just one of the ways we are working to reduce plastic packaging's environmental impact.

100% RECYCLABLE

MANUNATURE® & MANUPACKAGING'S ENVIRONMENTAL COMMITMENT

REDESIGN

Create and develop new products and solutions offering higher levels of performance from both cost and environmental perspectives.

RECYCLE

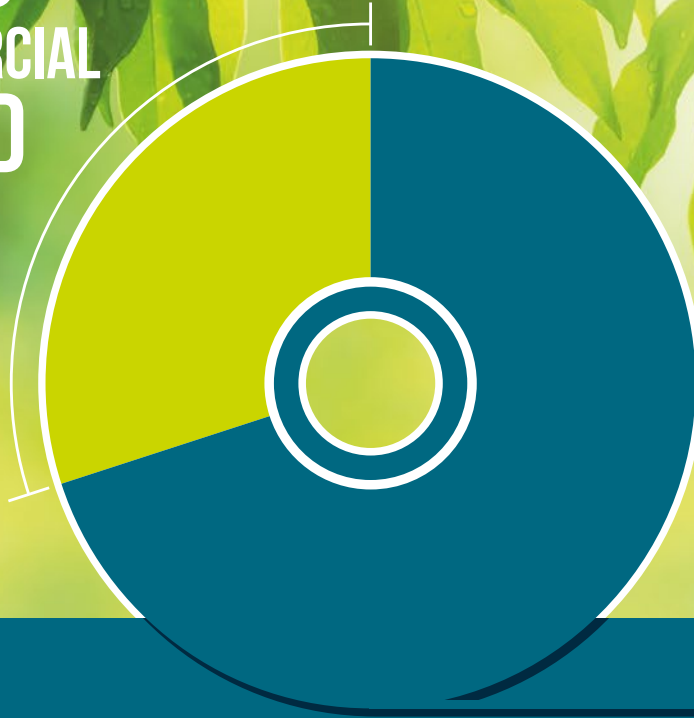

Reduce volume of waste going to landfill by developing more recyclable blends and producing products with higher amounts of PCR content.

REDUCE

Produce thinner, lighter and stronger solutions with the aim of minimising customer plastic use without affecting product integrity.

30%

POST-COMMERCIAL
RECYCLED
CONTENT

WHY 30%, BUT NOT MORE?

While in an ideal world 100% recycled content is a highly welcomed goal, we must acknowledge that because stretch film offers high power performance, it is required to work faultlessly during its application.

In this light, the introduction of 30% post-commercial recycled content is the optimum amount to offer a correlation between product quality and stability by using the best quality recyclate available, and such, this film is currently seen as state of the art.

FINISHED BLEND

Manunature® RR is manufactured as a high quality, superior performance **23 micron** Polyethylene stretch film with a **200% AT grade pre-stretch** capability.
